SUMMARY

Full-stack engineer who shipped a production iOS app to the App Store as a solo founder, owning product, design, backend, AI integration, operations and hiring. Eight years of shipping things that real users depend on, from real-time sports trading to consumer mobile.

EXPERIENCE

Founder & Solo Engineer · Faith Platforms Inc.

2024 – Present · Las Vegas, NV

Designed, built, and shipped Prava — a faith-based iOS app — as the sole engineer and product owner of a Delaware C-corp.

- **Architected the full stack** — Next.js + TypeScript + Capacitor on iOS, Neon (PostgreSQL) via Prisma, Cloudflare R2 for media storage, TanStack Query and Radix UI on the client.
- **Integrated multiple LLMs into production** — Claude (Opus, Sonnet), GPT-4o, and Whisper — powering Bible photo annotation extraction, voice-prayer transcription, daily journal reflection, and a 37-pattern insight engine.
- **Built automated tests** that block merges if photo annotation quality drops; landed on Opus with 2500px JPEGs after testing image sizes, formats, and prompts.
- **Owned the App Store release cycle** end-to-end: TestFlight, multi-rejection submission cycles, paywall and EULA compliance, Sentry crash monitoring, and parallel staging/production build workflows.
- **Designed and built the product surface** — a 19-screen onboarding flow, the Insights tab (donut emotional chart, Scripture Journey path), and the Goals system with custom animations and haptics.

Full-Stack Developer · Etainment (ticket brokerage)

2022 – 2026 · Dallas, TX, then remote

- **Built the dynamic pricing tool** brokers used to set and reprice ticket inventory.
- **Recreated Ticketmaster's venue maps** so brokers could draw rules (which seats to buy, at what price, under what conditions) directly on the map.
- **Wrote Chrome extensions** that pulled those rules into Ticketmaster's site and overrode the native shading so brokers saw their own targeting on top of the real listings.
- **Owned features end-to-end** — design through deploy — with brokers a Slack message away for feedback.

Trader → Developer Analyst · William Hill (acquired by Caesars)

Jul 2018 – 2022 · Las Vegas, NV

- Set in-game betting lines and prices; tracked customer activity to inform limit decisions.
- Taught myself to code on the trading floor and was promoted to Developer Analyst.
- Built internal tools for trading and ops: customer and pricing models in SQL and BigQuery, plus Looker dashboards used by traders and analysts.

SKILLS

Languages TypeScript, JavaScript, Python, SQL, HTML, CSS

Frameworks Next.js, React, Node.js, Capacitor, Prisma, TanStack Query, Radix UI, Tailwind, Flask

Infrastructure Neon (PostgreSQL), Cloudflare R2, Google Cloud Platform, BigQuery, Looker, Sentry

AI / LLMs Claude (Opus, Sonnet), OpenAI (GPT-4o, Whisper), prompt design, evaluation harnesses

Mobile iOS App Store release pipeline, TestFlight, StoreKit / IAP

EDUCATION

University of Nevada, Las Vegas · Business
